

STAKEHOLDER BRIEF

Retail Performance Decline | Analytics Investigation

PREPARED FOR
Chief Executive Officer
June 2026 | CONFIDENTIAL

SITUATION SUMMARY

Over the past 18 months, the company has recorded a sustained decline in performance across its 30-store estate, affecting revenue, customer activity, and operational efficiency. The deterioration is widespread, though its causes and distribution across stores, product categories, and customer segments remain unquantified. To address this, the Analytics Team has been commissioned to conduct a structured investigation into the drivers of decline and to identify concrete opportunities for recovery. This brief sets out the scope, key questions, and data assets that will underpin that work.

THREE KEY BUSINESS QUESTIONS & DECISIONS INFORMED

#	Key Business Question	Decision Informed
1	Which stores are consistently underperforming, and what operational or locational factors explain the gap?	Guides investment vs. closure decisions across the store portfolio, allowing targeted turnaround plans or resource reallocation.
2	Are there product categories experiencing a structural decline in sales, and which customer segments are driving or abandoning them?	Informs range rationalisation, supplier negotiations, and promotional prioritisation to protect margin and reverse category decline.
3	Is the loyalty programme effectively retaining customers and growing spend, or is it failing to convert engagement into revenue?	Determines whether the programme requires redesign, better incentive structures, or improved targeting to reduce churn and increase lifetime value.

DESCRIPTION OF AVAILABLE DATA

The investigation will draw on a dataset of approximately 50,000 records spanning an 18-month period. The four data domains below collectively enable a multi-dimensional view of performance — from store-level financials through to individual customer behaviour — providing the analytical foundation required to answer each business question above.

Store Performance	Sales revenue, footfall, revenue per sq ft, and period-on-period comparisons across all 30 locations.
Product Sales	SKU-level transaction data, category performance metrics, pricing, promotional uplift, and return rates.
Customer Transactions	Individual purchase records including basket size, spend per visit, purchase frequency, and channel.
Loyalty Programme Activity	Member enrolment dates, points earned and redeemed, visit frequency, and churn/lapse indicators.

RECOMMENDED NEXT STEPS

1. Analytics Team to complete data quality assessment and confirm readiness for analysis within five working days.
